

PDATrak

The Personal Digital Assistant (PDA) is fast becoming the device of choice for organisations that need to get business critical information to the finger tips of their mobile work force. With the addition of PDATrak, any organisation can track their PDAs; increasing their businesses productivity and conforming to new government duty of care guidelines.

The first company in the UK to develop 'push' mobile applications over GPRS and have pioneered the delivery of Mobile Worker applications with built in tracking. PDATrak utilises this technology to provide an always on tracking solution with optional combined Lone Worker protection.

PDATrak is a simple to use, cost effective tracking solution which is easy to install and scalable to any size of organisation. With 60 second updates as standard your mobile workers are visible on

the web based mapping system, accessed from any Internet connection.

PDATrak is future proof with options to add further functionality including lone worker protection, mobile worker job management and JobTrak web based job control systems.

PDATrak comes with the following list of impressive features:

- Windows PDA application.
- Covert running mode
- Configurable tracking intervals to conserve battery
- Day of week / time of day tracking configuration
- Optional lone worker protection
- Unlimited web based mapping.
- Full training and 24/7/365 telephone support
- History trails and ring fences as standard
- Comprehensive reporting module
- Optional fulfilment of PDAs
